

# CSA - Rotary Screw Compressors From 7,5 To 20 HP

## CSA Base

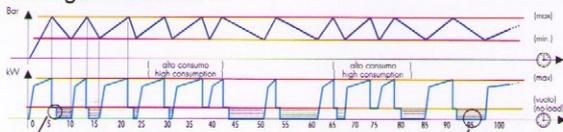

A layout where everything is rational. The particular care paid to resolving air circulation problems inside the machine and the use of absolutely reliable components has allowed obtaining optimal performance from an excellent screw air end.

Designed to produce little noise.

Efficient noise traps and careful study of air flows have allowed obtaining results well beyond expectations.

Easy Maintenance Ordinary maintenance requires removing only two panels for changing oil and filters. The belts are quickly replaced and/or adjusted by removing only one panel.

## Intelligent Shut Down

Periods of variable no - load operation as a function of consumption

= Energy savings

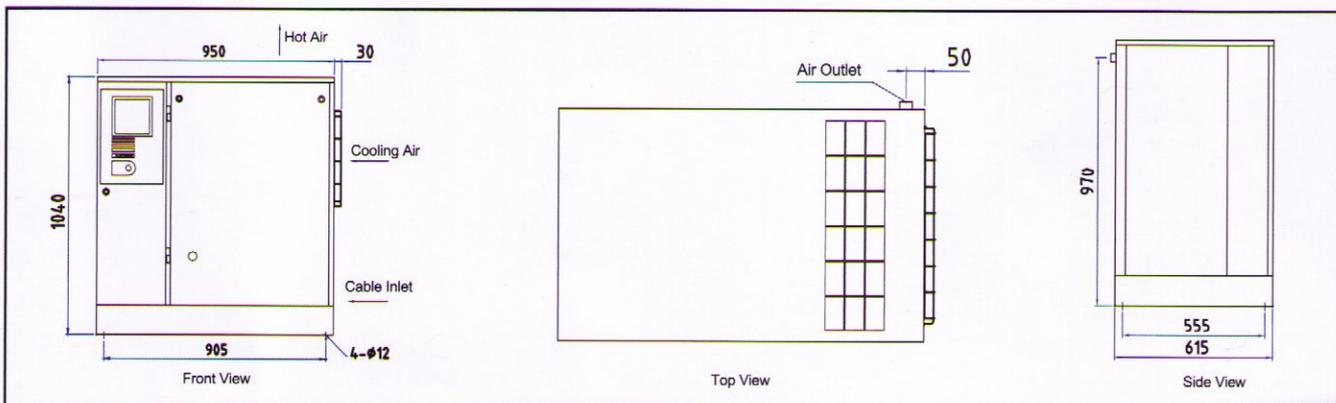

## Energy savings with "Intelligent Shut-down"

Regulation with the ES3000 controller allows the user to considerably reduce electrical energy consumption in the no - load phase, through the "intelligent shut down" feature, by automatically calculating, cycle by cycle, the minimum no - load functioning time, based on air consumption and the maximum number of start-ups per hour programmed.

# CSA - Rotary Screw Compressors With Tank + Dryer From 7,5 To 20 HP

## CSA Tank

The CSA TANK Version is a rotary screw compressor mounted on a tank that is completely preassembled and tested on the assembly line.

Silenced and oil injected rotary screw compressor. Compressed air receiver with pressure stabilization function and condensate separator.

The receiver rests on a structure that allows for easy handling.

**Installation is extremely simple:**  
just position the machine,  
connect the air output to  
the air distribution network  
and make the electrical connection.
